11 de mayo de 2022

To whom it may concern:

The signer informs on the student Fernando Pinto Gómez, at his request.

Fernando is currently developing his Ph.D. under my supervision in lattice-QCD calculation of gluon Green functions. In particular his thesis is about the nonperturbative features of the three-gluon vertex and propagator.

Unfortunately, he doesn't have any financement, and therefore it will be very welcome if he could benefit of some financial support from the organisation of the "XVth Quark Confinement and the Hadron Spectrum".

Best regards,

Feliciano de Soto
